

Appvance is an AI-driven and unified test platform that completely transforms your software QA process.

How **fast** do you want your **QA** to go?

Built from the ground-up to drive agile and devops, the Appvance AI-driven test platform combines multiple test types with the unique Appvance “write-once” methodology. The result is faster, better and vastly more productive testing operations for all applications.

- ➔ Automatically create comprehensive scripts amazingly fast.
- ➔ Test broader and deeper than ever before.
- ➔ Empower QA with incredible test automation.

## DevOps-ready

Appvance UTP accelerates software delivery, reduces risk and lowers cost by eliminating the redundancies of traditionally siloed approaches to software quality assurance automation.

## Write-once methodology

Most teams use multiple test automation tools, each one using a different language to create tests. With Appvance, virtually any test can be repurposed for use in another test type. For example, any functional test can be re-used as a performance test.

## Gain velocity without loss to rigor or security

Re-use of use cases across all test types provides a huge time savings, as different teams do not have to re-create the same cases over and over again. And once you have a use-case, you can pull dozens together into Test Scenarios that replicate real- world conditions, instilling QA rigor without additional effort.

## Collaboration and communication

Dev, QA, BA and Ops can all collaborate—writing and running tests as needed—all on the same platform. By eliminating five to ten old siloed tools, teams can finally work together fully.

## DevOps moves faster with Appvance UTP

Complete integration with Jenkins, Hudson, Rally, Bamboo & Jira to kick off tests automatically at builds. Choose local results repositories or use directly GIT and SVN. Appvance brings true DevOps velocity with quality using your existing CI tools and workflows.

## Key Features

Appvance is the only AI-powered unified test automation platform. Built with agile in mind, Appvance offers true beginning-to-end data-driven testing to quickly surface issues in a fraction of the time of traditional tools.

AI Driven	Automatically creates tests using machine learning from various standard data sources
Appvance Designer	A unique script-less recording environment for rapidly creating, editing and automating complex data-driven use cases with ultra-low brittleness.
Full Test Suite	One integrated solution includes functional, performance, load, app penetration, compatibility, database, DDoS, mobile testing and more.
Works with legacy scripts & tools	Runs existing scripts: Selenium, Visual Basic, HTTP Archive (HAR), Perl, Groovy, Selenium RC, .NET, C#, PHP, Jruby, SoapUI, JMeter, Sahi, JUnit, Jython, etc.
Write-Once Methodology	Virtually any test can be repurposed for use with another test type.
True beginning-to-end testing	Tests software applications the way users experience them and yield real-world results.
Agile from the start	Integration with Jenkins, Hudson, Rally, Bamboo & Jira to kick-off tests automatically at build.

*The AI-powered Appvance testing platform transforms software QA, delivering 1,000X more productivity over manual scripting and script maintenance.*

## Testing for modern application delivery

Appvance enables faster, better and more productive testing operations for all modern applications, including HTML5, Java thick clients, Swing/AWT/SWT, mobile, SOAP/REST services, corporate apps, Oracle forms-fuse-fusion, Windows thick clients, Java FX, AngularJS, advanced JS canvas apps, Tableau apps, messaging platforms and most enterprise applications.

App Penetration (DAST)	Cross-browser compatibility	Functional
DDoS App Penetration	Load & Scalability	Performance
Regression	Smoke	Soak
Stress	Synthetic APM	Unit

Appvance is the first AI-driven test automation platform. It completely transforms software QA. Launched in 2012, the company is headquartered in Sunnyvale, California, with offices in Costa Rica and India.
